Outlook For Mac 2016 Import Contacts From Text File

To do this, you try to import the .csv file that was exported from Outlook for Mac. You try to transfer data from Microsoft Outlook 2016 for Mac or Outlook for Mac 2011, such as email and contacts, to Microsoft Outlook for Windows. First, go to File in the top-left to reach the menu shown below, then click Open & Export, then Import/Export. Choose the option you want and click Next. For this particular example, we will be using a .CSV (Comma Separated Values) file that was exported from the email service provider.

outlook import contacts from text file
